Sen. Hillary Clinton
Embryonic person,1947

All these well-known persons are pressuring President Bush to endorse the use of human embryonic stem cells for medical research. As famous people often do, they've forgotten where they came from. Because all of them were once embryonic persons. And all would have died anonymous deaths had their stem cells been removed.

Real scientists understand this.

We, the members of the ABAC, find the scientific evidence irrefutable in proving that human embryos are living persons and that removing their stem cells is nothing less than a deliberate act of taking a human life. We urge President Bush to follow good science, reject bad counsel and to protect all human persons at every stage of life.
