

St. Baldrick's Foundation

Things to Consider

<https://www.stbaldricks.org/faq>

St. Baldrick's Foundation does give grants to St. Jude Children's Research Hospital. They list this on their FAQ page and on their 990s:

While St. Jude's is a hospital and research institution, we are a foundation that makes grants to St. Jude's and many other excellent research institutions, to support their research. To date, we have made 36 grants to St. Jude's, totaling \$9.8 million with an additional \$698,717 going to St. Jude's from our grant to the Children's Oncology Group, for a total of more than \$10.4 million. We love to see people support local institutions where children you know would likely be treated. And of course, we love for people to support St. Baldrick's, so that we can continue making grants for the most promising research, no matter where it is being done. No single hospital has a monopoly on talent or great ideas so by supporting St. Baldrick's you know you are supporting the best!

Stance on Human Embryonic Stem Cell Research

<https://www.stbaldricks.org/faq>

The link above provides St. Baldrick's full statement on human embryonic stem cell research:

St. Baldrick's Foundation funds cannot be used for human embryonic stem cell research. This is not a statement on whether or not we think it should be supported; the decision is based on the fact that many of our donors and volunteers — our source of funds — would not be comfortable supporting it. Stem cell transplantations *not* using human embryonic stem cells — using cord blood or matched donors — are often used in treating childhood cancer patients, and our funds may be used in this non-controversial area of research.
